

Imagine being able to add **servers**

As Many As You Want
As Quickly As You Want

Security

dinServer is a hosted virtual server offering from dinCloud, a cloud transformation company. dinCloud provides our customers with a complete virtual private datacenter—an encapsulated environment with your own private virtual servers, private virtual firewalls, private virtual network and private virtual storage. This unique industry offering, coupled with our ability to establish private links to your existing data center, provides you with an unparalleled level of security that is unmatched by anyone in the industry.

Control

Management in the cloud means nothing if you cannot self-manage. Take control so internal resolutions are within minutes rather than hours. With dinManage, a cloud orchestration and management platform, you hold the keys. Spin-up, spin-down or adjust configurations including memory, storage, compute, and applications. Plus, with no data transfer fees or other hidden fees, you won't feel unnatural factors tugging at you. It's uncompromising control.

Performance

Performance? Imagine having the controls in your hands to add CPU compute and RAM at your whim. Not only are additional resources available on demand but you can be assured that you are correctly sized for what you need. No more over-buying. dinCloud is built with cloud in mind – connectivity with InfiniBand datacenter fabric (Intel) and a single pane of glass to spin up, spin down, and manage your infrastructure.

Flexibility

Cloud transformation is about future-proofing. dinCloud helps you get into the cloud rapidly through our business provisioning services. But you want flexibility, right? That's why our hypervisor agnostic design allows you to move out too. Want the option to go to a private cloud? No problem. Flexibility is also about agility. With dinCloud, speed time-to-market to get new products out and enable new CEO initiatives faster than expected.

dinCloud can assist customers with deployment of software or applications through our Professional Services network.

We provide TCO and ROI analyses of moving to a hosted virtual server provider. Contact our cloud specialist for details regarding monthly and annual subscriptions. dinCloud provides a guaranteed 99.999% up-time.

The future is amazing, and dincloud will help you transition into it.
