

Imagine being able to access your desktop

From any device you want, any app you want

When Microsoft Windows 3.1 came out, it turned a text based interface into a graphical user interface, making the PC personal. When Blackberries came out, they made it easier to respond to emails from anywhere.

Now, hosted virtual desktops (HVD) are the evolution in the workplace.

The entire digital

workplace follows employees making productivity enhancements unlike previous technologies. With dinHVD Enterprise, you can take advantage of built in managed services such as help desk, monitoring services and more.
